An experimental study was made of the histopathological
alterations produced in the optic nerve of the rabbit by
alcoholic-tabagic intoxication. The simultaneous
administration of large doses of vitamin B₁₂ or of its
analogue C₅₅ proved to be capable of preventing or
arresting the appearance of the alterations.

An electric method of producing surgical anesthesia by
low-frequency and low-intensity alternating current
is described. The method consists in increasing the
current very slowly after the test animal has been
prepared with barbiturates. It is believed that it is a
question of exciting the diencephalic sleep center. By
reducing the excitation of the motor and tonic centers
